

# ADRIÁN PLIEGO PÉREZ

AI Engineer | Machine Learning Engineer | Backend Engineer

Madrid, Spain | +34 675 931 520 | adroplpe@gmail.com

linkedin.com/in/adrianpliegoperez | github.com/adro0303 | adrian-pliego.vercel.app

## PROFESSIONAL SUMMARY

AI Engineer with a BSc (Hons) in Artificial Intelligence and over a year of professional experience building and deploying production AI software. Owner of an LLM-powered assistant grounded in live CRM data, promoted to Project Team Lead of a four-person engineering team. Ships end to end across Python and machine learning, TypeScript/NestJS backends, REST APIs, PostgreSQL, Docker and GitHub Actions CI/CD, with a public portfolio spanning ML research, security analytics and open-source developer infrastructure. Native Spanish, C1 English, based in Madrid and open to hybrid or remote roles.

## PROFESSIONAL EXPERIENCE

### AI & Software Engineer, promoted to Project Team Lead - Authect

Remote | May 2025 - Present

- Designed and shipped an LLM-powered CRM assistant that answers natural-language questions over live tenant data, connecting model responses to backend services, RBAC permissions and CRM domain logic.
- Owned the AI feature end to end: prompt design, data grounding, backend integration, deployment and iterative evaluation against a curated internal set of representative user questions.
- Built multi-tenant SaaS backend services with TypeScript, NestJS, Prisma, PostgreSQL and REST APIs - tenant isolation, role-based access control, search, filtering, sorting and pagination across the platform's core resources.
- Promoted from developer to Project Team Lead; coordinate a four-person backend/frontend team on planning, priorities, code review and releases while remaining hands-on in development.
- Led production deployments and cross-functional delivery using Git, GitHub, automated testing and AI-assisted engineering workflows.

### Insurance Sales Representative - Generali Seguros

Madrid, Spain | Jun 2024 - Oct 2024

- Target-driven consultative sales: analysed client needs, explained complex products in plain language and translated requirements into suitable solutions.

### Network & Systems Technician Intern - Mais Informática

Madrid, Spain | Dec 2022 - Mar 2023

- PC assembly and repair, Windows/Linux installation, network and router configuration, maintenance and user support; contributed code to an internal software tool.

## SELECTED AI, DATA & INFRASTRUCTURE PROJECTS

**BSc Final-Year Project: Macro-News Forecasting & Regime-Aware ETF Allocation** | Python, PyTorch, scikit-learn, pandas, NumPy. Benchmarked a PyTorch MLP against five classical baselines to forecast next-day returns for 15 ETFs and BTC from GDELT macro-news features, under strict walk-forward validation, leakage checks and cost-aware backtesting; a Random Forest mandate predictor then drives a regime-aware ETF allocator backtested against Markowitz and static benchmarks. Both repositories report negative results alongside positive ones.  
github.com/adro0303/macro-news-market-forecasting · /mandate-investor-profiling-fyp

**OpenSSH Log Anomaly Detection** | Python, scikit-learn, Docker, pytest, GitHub Actions. Config-driven unsupervised security pipeline that parses raw OpenSSH logs, engineers temporal and behavioural features and ranks suspicious events with Isolation Forest, LOF and One-Class SVM; evaluated with weak-label heuristics using PR-AUC and Recall@K, plus unit tests and CI. github.com/adro0303/AI-LogAnomalyDetectionSystem

**ipa-builder (open source)** | GitHub Actions, macOS runners, Bash, YAML, gh CLI. CI/CD pipeline that compiles unsigned iOS build artefacts on cloud macOS runners, using scoped fine-grained tokens to check out a separate target repository securely - removing the need for local Mac hardware or a paid developer account. github.com/adro0303/ipa-builder

**auto\_applier** | Python, Streamlit, SMTP, CLI design. Local-first outreach automation tool with lead import, draft generation, a manual approval gate, dry-run validation, rate-limited sending and delivery reporting; live sending is gated behind an explicit double confirmation.  
github.com/adro0303/auto\_applier

## TECHNICAL SKILLS

**AI & Machine Learning:** Python, pandas, NumPy, scikit-learn, PyTorch, TensorFlow, LLM applications, prompt engineering, live-data grounding (RAG-style), model evaluation, feature engineering, time-series modelling, anomaly detection, backtesting.

**Backend & APIs:** TypeScript, JavaScript, Node.js, NestJS, Prisma, REST APIs, multi-tenant SaaS architecture, RBAC, authentication, structured data access. Also: Java, C++.

**Data & Databases:** SQL, PostgreSQL, data modelling, analytics workflows, Jupyter, Streamlit.

**DevOps & Systems:** Docker, Git, GitHub, GitHub Actions, CI/CD, pytest, Bash, YAML, Linux, Windows, cloud deployment, networking and TCP/IP, virtual machines, production debugging.

## EDUCATION & LANGUAGES

**BSc (Hons) Artificial Intelligence** - Upper Second-Class Honours (2:1) | Coventry University, United Kingdom | 2026

**Higher National Diploma (HND) in Computing** - Artificial Intelligence Pathway | MSMK University, Madrid, Spain | 2025

**Técnico en Sistemas Microinformáticos y Redes (SMR)** | Academia DELTA, Spain | 2022

**Languages:** Spanish (native), English C1 - IELTS (2025).
