

ADRIAN PLIEGO PEREZ

AI Engineer - LLM Applications & Backend | 1+ year in B2B SaaS

Madrid, Spain | +34 675 931 520 | adroplpe@gmail.com

linkedin.com/in/adrianpliegoperez | github.com/adro0303 | adrian-pliego.vercel.app

PROFESSIONAL SUMMARY

Target roles: AI Engineer / Machine Learning Engineer. Over a year of professional experience in B2B SaaS, where I own the AI assistant of a multi-tenant CRM platform: it lets business users ask questions about their own data in plain language and get reliable answers back. Promoted to lead a four-person engineering team after taking the feature from idea to production. I combine machine learning in Python with backend development (TypeScript, NestJS, PostgreSQL, REST APIs) and production deployment (Docker, CI/CD); my public portfolio also covers finance, cybersecurity and developer tooling. English C1 (IELTS 2025), with a BSc taught and assessed entirely in English in the United Kingdom. Native Spanish. Based in Madrid, open to hybrid or remote roles.

PROFESSIONAL EXPERIENCE

AI & Software Engineer, promoted to Project Team Lead - Authect

B2B SaaS - multi-tenant CRM platform | Remote | May 2025 - Present

- Designed and shipped the product's AI assistant: business users ask questions in plain language and receive answers drawn from their own live CRM data, built with an LLM connected to backend services, user permissions and business logic.
- Owned the AI feature end to end - design, integration, deployment and continuous evaluation against a curated internal set of representative user questions - improving the reliability of the answers over successive releases.
- Built the multi-tenant backend with TypeScript, NestJS, Prisma, PostgreSQL and REST APIs, keeping each client's data isolated and access controlled by user role.
- Promoted from developer to Project Team Lead; coordinate a four-person backend/frontend team on planning, priorities, code review and releases while remaining hands-on in development.
- Led production deployments and cross-functional delivery using Git, GitHub, automated testing and AI-assisted engineering workflows.

Insurance Sales Representative - Generali Seguros

Insurance | Talavera de la Reina, Spain | Jun 2024 - Oct 2024

- Consultative, target-driven sales: analysed client needs and explained complex products in plain language - the same skill I now use to translate technical work for non-technical stakeholders.

Network & Systems Technician Intern - Mais Informatica

IT services | Talavera de la Reina, Spain | Dec 2022 - Mar 2023

- PC assembly and repair, Windows/Linux installation, network and router configuration, maintenance and user support; contributed code to an internal software tool.

TECHNICAL SKILLS

AI & Machine Learning: Python, pandas, NumPy, scikit-learn, PyTorch, TensorFlow, LLM applications, prompt engineering, live-data grounding (RAG-style), model evaluation, feature engineering, time-series modelling, anomaly detection, computer vision fundamentals (handwritten digit recognition), backtesting, predictive analytics linked to business objectives, rapid prototyping in Jupyter and Streamlit. R for statistical data analysis.

Backend, APIs & Frontend: TypeScript, JavaScript, Node.js, NestJS, Prisma, REST APIs, multi-tenant SaaS architecture, RBAC, authentication, structured data access. Frontend: React, Next.js, HTML/CSS. Other languages: Java, C++, R.

Data & Databases: SQL, PostgreSQL, data modelling, analytics workflows, Jupyter, Streamlit.

DevOps & Systems: Docker, Git, GitHub, GitHub Actions, CI/CD, pytest, Bash, YAML, Linux, Windows, cloud deployment, networking and TCP/IP, virtual machines, production debugging.

SELECTED PROJECTS

Finance / Quantitative ML - BSc Final-Year Project | Python, PyTorch, scikit-learn, pandas, NumPy. Predicts next-day returns for 15 ETFs and BTC from macroeconomic news data (GDELT), benchmarking a PyTorch neural network against five classical models under strict chronological validation and cost-aware backtesting; a second component profiles investor mandates with a Random Forest and allocates ETF portfolios by macro regime, tested against Markowitz benchmarks. github.com/adro0303/macro-news-market-forecasting - /mandate-investor-profiling-fyp

Cybersecurity - OpenSSH Log Anomaly Detection | Python, scikit-learn, Docker, pytest, GitHub Actions. Detects suspicious activity in server access logs without labelled data: parses raw OpenSSH logs, builds behavioural features and ranks the most anomalous events using three unsupervised algorithms, with evaluation metrics, unit tests and automated CI. github.com/adro0303/AI-LogAnomalyDetectionSystem

Developer tooling - ipa-builder (open source) | GitHub Actions, macOS runners, Bash, YAML, gh CLI. CI/CD pipeline that builds iOS app packages in the cloud, with secure scoped access to a separate code repository - a process optimisation that removes the need for local Mac hardware and for a paid developer account. github.com/adro0303/ipa-builder

EDUCATION & LANGUAGES

BSc (Hons) Artificial Intelligence - Upper Second-Class Honours (2:1) | Coventry University, United Kingdom | 2026

Higher National Diploma (HND) in Computing - Artificial Intelligence Pathway | MSMK University, Madrid, Spain | 2025

Vocational Diploma in Microcomputer Systems & Networks - Spanish EQF Level 3 | Academia DELTA, Spain | 2022

Languages: Spanish (native). English C1 - IELTS (2025); degree taught, written and assessed entirely in English at a UK university. Comfortable working day to day in English-speaking teams.
